With standard PowerPoint tools, you can also create mini-games with animation tricks or video presentations and surveys with strict browsing. In this article, step by step, we will help you create multiple quizzes using PowerPoint. Step 1: Create a quiz front pageIn this demo we use PowerPoint 2016.Open a new slide and enter a name for the survey. Ours will be called the Mt. Everest Quiz. You can add additional text information as we did. Add an image that will match your theme. To do this, click the Insert tab, and then select Pictures, or just click the picture icon in the center of the slide. Step 2: Create a question and answer slideTo create a question, navigate to the next slide, and then type it in the Name box. You can also use incomplete sentences, phrases, or mathematical equations instead of questions. Add a picture that will illustrate the question well. Add answer options to your question. Go to the Insert tab, and then click the Text Box button. Enter the first option, and then add the rest of them below. In multi-choice tests, there is usually one correct answer (also called a key) and three incorrect answers (also called distracters). However, you can add as many options as you want. Create another question and answer the quiz slides in the same way. Step 3: Create the right answer slideAdd additional slide after the first question, which says that the learner has chosen the

correct answer. In the Name box, type a greeting message: True! - That's right! / Well done!, etc. In the Content box, add a phrase that will encourage students to continue the quiz, such as Go to the next question! / Continue the quiz! / Let's move on! Step 4: Create an incorrect response SlidePerform the same steps to create an incorrect reply slide that will be displayed when the testers make the wrong choice. Add another slide and type the appropriate text in the title box, such as Oh, it's incorrect... This time, however, give your learners the opportunity to get back to the question and try again. So, this is what our wrong answer slide will look like:To make knowledge checks even more efficient for learners, provide feedback on each wrong answer. Add useful information to the feedback slide, which explains certain questions and answers in more detail. After each PowerPoint survey question, continue to add correct and incorrect response slides. Step 5: Adding browsing to QuizNow is the time to link the correct and incorrect responses to the corresponding feedback slides. To do this, click the reply text box, go to the Insert tab, and then tap Hyperlink. In the window that opens, select Location in this document, and then select the correct or Incorrect slide that you want. To continue browsing from feedback slides, add a hyperlink to the Continue Survey text. You'll need to repeat the steps for each slide again, because feedback slides should cause a new question each time. To allow learners to return to the question, open the slide for incorrect answers, and then click the text Try again. Add a hyperlink to the question where the learner made a mistake. This go to the Insert tab, and then click Actions. In the window that opens, select Hyperlink to → viewed slide. Our short survey in PowerPoint is ready. Download the Mt. Everest Quiz source file to test your knowledge of the world's highest mountain. Create a more detailed Faster creation of a survey in PowerPoint may take some time because you need to create feedback slides for each answer and add navigation between them manually. And that's not the only reason why it's better to use special development tools like iSpring QuizMaker. Here are some things that powerpoint is missing:You can't create other types of questions, such as drag and drop, matching, multiple answers, survey, sequence, and more. You can't show how many test learners have completed and how many points they have scored. You can't see who takes your quiz or how successful they are. You can't put a PowerPoint survey on your site, share it on social media, or even send an email to someone who doesn't have PowerPoint (no, not everyone does it). We decided to enhance our Mt. Everest Quiz with iSpring QuizMaker, a simple creation tool, and that's what we have: iSpring QuizMaker allows you to choose from 14 types of questions: digital questions, drag and drop questions, true/false questions, matching questions, fill blanks, multiple choices of questions, multiple questions, hotspot, sequence, short answer, select from list, drag words, likert scale, and essay detailed Such diversity helps to rekin up the learning process and keep learners. In most cases, knowledge simply can't be tested with just a few choices of quizzes. For example, history tests require an understanding of how events have evolved in a timely manner. That's why we've included a sequencing question in the updated quiz. Sometimes you need to select more than one key response. These multiple answer questions cannot be created only in PowerPoint. However, we would not reject the idea and used the iSpring QuizMaker for this purpose. To learn how to start using the iSpring QuizMaker, see this short video tutorial:Quiz that scores ResultsThere are no tests without evaluation; that's why it's very important that your quizzes evaluate students' results. As we have already mentioned, PowerPoint does not have such an option; so we added only a neutral end slide, which did not indicate whether the quiz was passed or failed. On the contrary, enhanced mt. everest quiz classes learners results and shows their score, both during and at the end of the quiz. For your quiz to be sorted, all you have to do is choose the points type based on the points type in the iSpring QuizMaker property window and set the result for you. By default, the passing result is 80%. With iSpring QuizMaker, the slide pass of results is created by default, so you don't need to add them manually. At the same time, you can change the slide message to your personal taste or needs and add images, audio, and video. When you've finished creating a quiz, you can publish it to HTML5 so that learners can view it on web browsers or mobile devices, or any eLearning format to load on LMS, including SCORM 1.2 and 2004, AICC, xAPI and cmi5. You can also save a quiz as Word Word printed and presented as a paper test. NOTE: To collect survey results, you don't even need an LMS that automatically tracks the progress of the survey. If you're not using a learning platform, just choose whether to receive results by email or send them to your server in the iSpring QuizMaker Properties window. More Amazing CapabilitiesEffective eLearning and eTesting are all about the details. iSpring QuizMaker gives authors additional options, such as assigning scores and penalties for individual questions and mixing answers that students have on their hands. You can also set the number of tests and limit the time to answer questions to prevent fraud. Feel free to use feedback and branching, as well as customize your quiz for each particular learner. For example, link incorrect answers to additional information slides and link the correct answers to new questions. To immerse yourself in the process of creating ratings, read our post on how to perform online quizzes. To sumwhile make a quiz powerpoint is an option, its functionality is limited, and it can be very difficult for the author. With this classic software, you can use multiple selection and active point questions. However, more innovative software is needed to create an interactive test that will really test students' knowledge. Try the iSpring QuizMaker for free and start creating exciting interactive quizzes now. Nwo.
